

3-step stool for clinic h709_15

Hospital 3-step stool in painted steel with non-slip platforms for access to medical beds. Dimensions W47 x D87 x H64 cm.

The step stool is an indispensable tool in clinics, medical offices, and physiotherapy practices, designed to facilitate patient access to medical beds by reducing physical effort during positioning. The painted steel structure with a white finish ensures durability, ease of cleaning, and integration into standardized clinical environments.

The product consists of **three steps**, each equipped with a **non-slip platform** that ensures stability and safety during ascent, a critical element in contexts where patients' balance may be compromised by physical conditions, advanced age, or states of reduced mobility.

Technical features

- **Dimensions:** Length 47 cm × Depth 87 cm × Height 64 cm
- **Number of steps:** 3
- **Structure material:** White painted steel
- **Step platforms:** Non-slip coating on all steps
