

## 6-place hospitalization cage h601\_23

Hospitalization cage for veterinary use, robust structure with 6 places, removable non-toxic PVC dividers, conductive wheels with brakes, dimensions W90 x D72 x H198 cm.

The veterinary hospitalization cage is a housing device intended for veterinary clinics for the separation and containment of pets undergoing treatment and observation.

The structure combines **construction robustness and operational mobility**. It is equipped with **conductive wheels for electromagnetic statics**, 2 of which are braking, allowing the cage to be moved easily within the clinic facility. The braking wheels ensure stability during procedures.

The cage is configured for **6 small and medium-sized animals** distributed over 3 levels. Thanks to the presence of **3 removable non-toxic PVC dividers**, the levels can be used independently to accommodate different patients, or the spaces can be unified for larger hospitalizations. The **dedicated guides for the dividers** facilitate rapid positioning and removal.

## Technical characteristics

- Number of places: 6 on 3 levels
- Removable non-toxic PVC dividers
- Guides for removable dividers
- Conductive wheels (2 braking)
- Dimensions: W90 x D72 x H198 cm
- IV pole supports not included
