

9-place cat hospitalization cage h601_27

Cat hospitalization box for veterinary clinics. Modular cage for up to 9 animals with removable PVC dividers, access doors, and conductive wheels. Dimensions L181.5 x D72 x H216.5 cm.

The cat hospitalization box is a dedicated solution for veterinary practices and clinics for the hospitalization of admitted felines. It allows for providing effective care while reducing stress and sudden movements, guaranteeing a controlled and safe environment during recovery and post-operative phases.

The structure allows for **hosting up to 9 animals simultaneously** thanks to a modular system based on **removable non-toxic PVC dividers**. The dividers can be completely removed to transform the lower and upper sections into a single recovery area, adapting to the clinical needs of the moment.

All dividers are equipped with **cat passage holes**, facilitating natural circulation within the box. On three side doors, **dedicated small doors for safe cat entry** are installed, allowing controlled access without wide openings that could cause escapes or stress.

The base is equipped with **conductive wheels for electromagnetic staticity**, of which **two have brakes**, guaranteeing mobility without creating harmful electric fields and stability during clinical operations.

Technical characteristics

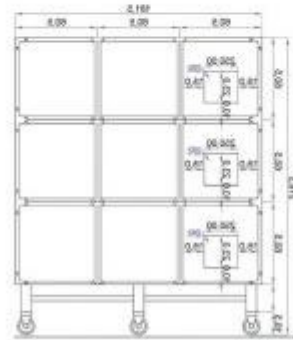

- Type: Modular cat hospitalization cage
- Divider material: Non-toxic PVC
- Division system: Removable dividers with dedicated guides
- Capacity: Up to 9 animals
- Access: 3 small doors for cat entry on side doors
- Internal passages: Holes on all dividers for cat circulation
- Mobility: Conductive wheels (2 with brakes) for electromagnetic staticity
- Dimensions: Length 181.5 cm × Depth 72 cm × Height 216.5 cm
