

Acoustic panel complete with brackets h1033_05

Single-sided sound-absorbing acoustic panel, 0.81 m², wall installation with brackets included. Modular design for offices and professional environments.

The **acoustic panel H1033_05** represents an advanced technical solution for the correction of acoustic comfort in work environments. Designed for the **reduction of reverberation**, this single-sided module effectively acts on reflected sound waves, significantly improving speech intelligibility in offices, meeting rooms, and open space areas. Its structure is optimized for **wall installation**, allowing a strategic distribution of absorption points based on the architectural criticalities of the room.

Technical features

- **Type:** single-sided sound-absorbing panel
- **Weight:** 9 kg
- **Sound-absorbing surface:** 0.81 m²
- **Technical absorbing volume:** 0.07 m³
- **Installation:** wall-mounted or on dedicated supports
- **Assembly kit:** support brackets included in the supply
- **Modularity:** designed for multiple geometric configurations (tangram style)
