

Aluminium dog transport cage h601_72

Aluminium and galvanized mesh dog transport cage, 90x55x70 cm, tiltable back part, professional and private use.

The **dog transport cage H601_72** is designed to ensure the **safe, stable and hygienic** transport of animals inside professional or private vehicles. It is particularly suitable for use in **veterinary clinics, kennels, animal boarding facilities** and for private individuals who frequently transport dogs by car.

Built with a **solid aluminium structure** and **high-resistance galvanized mesh**, it guarantees **durability, lightness and protection from atmospheric agents**. The open mesh design on multiple sides allows for excellent **air circulation** and visibility, ensuring maximum comfort for the animal during the journey.

A distinctive feature is the possibility to **request a tilted back part**, to adapt the cage to the shape of the trunk of cars and vans, allowing for **better use of space** and greater stability on the road. This makes the model extremely versatile and suitable for numerous vehicle models.

Thanks to its generous dimensions (**90 x 55 x 70 cm**), it is suitable for **medium-sized dogs** or for multiple temporary transports, depending on the size of the animals.
