

Aluminium telescopic ladder h858_15

Professional 3.2-metre telescopic ladder in anodized aluminium, 150 kg load capacity, 10 non-slip steps and EN 131 safety certification.

This **telescopic ladder** has been designed to meet the needs of **professional use**, where the combination of operating height and logistical compactness is essential. The structure is made of **anodized aluminium**, a material that guarantees high mechanical resistance and superior protection against oxidation, while maintaining a low weight to facilitate mobility between different work environments.

The telescopic system allows the ladder to be extended up to a **2 x 5 steps** configuration, offering a versatile solution for maintenance, installations, and technical interventions. Operator safety is guaranteed by high-quality structural components and injury prevention systems integrated into the design.

Technical features

- **Material:** high-resistance anodized aluminium
- **Maximum load capacity:** 150 kg
- **Steps:** 10 steps (2 x 5) with ribbed non-slip surface
- **Safety:** automatic locking mechanism for each section
- **Components:** aluminium coupling rings
- **Configuration:** folding and telescopic structure
- **Storage dimensions:** 86 x 46 x 18 cm
- **Maximum extended height:** 3.2 metres
- **Certification:** complies with EN 131 European safety standards
