

Ankle restraint strap h239_61

Padded and breathable polypropylene ankle strap with sliding buckle. Use for immobilization. Wash at 60°C.

The **H239_61 ankle restraint strap** is a **padded and breathable bed ankle strap**, designed for patients requiring **safe and controlled immobilization of the lower limbs**. Ideal for healthcare environments, it prevents unauthorized movements and involuntary manipulations by the patient or unauthorized persons.

Made of **polypropylene fabric**, it guarantees **comfort and breathability**, reducing the risk of skin irritation during the restraint period. The **internal padding** protects the patient from localized pressure and friction, while the **plastic sliding buckle system** allows for **simple, fast, and safe adjustment**, adapting to different bed types and body sizes.

The H239_61 ankle strap is recommended for use in **hospitals, healthcare facilities, assisted living facilities, and home care contexts**, where **temporary restraint, respectful of patient safety and comfort**, is required.

FAQ:

1. **Is this strap suitable for all hospital beds?**
Yes, thanks to the buckle adjustment, it adapts to various types of beds.
2. **Can the patient open it themselves?**
No, the buckle requires operator intervention for opening and adjustment.

3. **Is the material breathable?**

Yes, polypropylene promotes skin ventilation.

4. **How is the device cleaned?**

Washable up to 60°C. Do not iron, do not use bleach or tumble dry.

5. **Is the device reusable?**

Single-user use is recommended to ensure hygiene and safety.

Mini buying guide:

When choosing an ankle strap for patients, it is essential to ensure **safety, comfort, and ease of use**.

The H239_61 model combines a **padded structure** and **breathable fabric** with a **simple buckle fastening system**, ideal for temporary restraint situations in healthcare and home settings.

It is an effective solution that complies with the hygienic-sanitary requirements of hospital facilities.
