

Anti-decubitus air mattress with analog compressor h230_108

Anti-decubitus air system with analog compressor. 17 interchangeable elements.

The anti-decubitus system, consisting of an **analog compressor with pressure regulation** and an **air mattress with interchangeable elements**, promotes, through the alternation of contact points with the patient, blood circulation and good **tissue oxygenation**, preventing the onset of pressure sores. The **compressor is equipped with a knob** that allows you to **adjust the pressure according to the patient's weight**. Compact and silent, it can be **placed on the ground** or **hung on the bed rail** thanks to two **support hooks**. Two **LED indicators**, one red and one green, highlight the pressure condition of the connected mattress and an acoustic alarm system signals a lack of pressure. The compressor is also equipped with the **Static system** which **blocks the alternating inflation system** and transforms the connected mattress into a normal mattress, i.e., with all elements inflated. The mattress is made of medical-grade PVC, subjected to antibacterial treatment. It consists of **17 interchangeable elements**, which inflate alternately, fixed with snap buttons, which facilitate any replacement in case of breakage and allow for cleaning. **Six central elements** are provided with **low air loss micro-holes** to allow for a more comfortable and dry rest. **The mattress is completed by four elastic bands** at the corners that allow it to be anchored to the underlying mattress. It is equipped with a CPR Valve, which is used for the immediate deflation of the mattress for urgent resuscitation interventions. The **waterproof and breathable cover** is provided with a **zipper** that runs along the entire perimeter of the mattress.

Technical features:

- Mattress: 17 elements
- Inflated dimensions: 200x90xh.12.5 cm
- 4 elastic fasteners
- Material: nylon/pvc
- Cover: nylon/pvc
- Max supported weight: 160 kg
- Analog compressor
- Power 220V / 50Hz
- Air flow: 7/8 liters per minute
- Pressure: 30mmHg - 60 mmHg
- Alternating cycle: 12 minutes
- Consumption: 7 W
- Fuse: 1 A
- Compressor dimensions: L28xD20.5xH11 cm
- Power cord length: 180 cm
- Approximate weight: 2.2 kg
