

Anti-decubitus kit with mattress and compressor h582_242

Anti-decubitus kit h582_242 in PVC for prevention up to stage III. 17-element system with silent compressor, CPR valve and 160 kg capacity.

The **h582_242 anti-decubitus kit** is a professional system designed for the clinical management and prevention of pressure injuries in high-risk patients. Ideal for hospital settings, nursing homes, and home care, the system is indicated for the **prevention of pressure sores up to stage III**. The synergy between the cell mattress and the low-noise compressor allows for effective pressure relief at load points, which is essential for long stays in bed.

Technical features

- **Clinical indication:** prevention of pressure sores up to stage III
- **System:** cell mattress + compressor
- **Materials:** high-resistance Nylon and PVC
- **Mattress configuration:** 17 total elements (8 of which are micro-perforated for breathability)
- **Pillow function:** first 3 elements are static for head support
- **Pressure mechanism:** 2-way alternating on the rest of the body
- **STATIC function:** stops alternation for nursing procedures or static rest
- **Inflated mattress dimensions:** 196 x 86 x 13 cm
- **Cell height:** 13 cm
- **Maximum capacity:** 160 kg
- **Cover:** biocompatible Nylon/PU, waterproof, breathable and certified for fire reaction
- **Practicality:** 4-way perimeter zipper for total cover removal
- **Emergency safety:** CPR valve with deflation time of approximately 15 seconds
- **Connections:** quick connectors with safety lock, suitable for patient transport
- **Fixing:** bed anchoring straps and integrated cable management eyelets
- **Compressor:** dimensions 300 x 135 x 110 mm
- **Air delivery:** 7.5/8.5 LPM with adjustable pressure 55-120 mmHg
- **Noise level:** extremely low (30-35 dB)
- **Operational safety:** visual and audible alarm for low pressure, interchangeable air filter
- **Power supply:** 220V / 50 Hz with 5-meter cable and T1A 250V fuse
