

Anti-decubitus mattress for pressure sores h937_04

Ventilated anti-decubitus mattress in expanded polyurethane (195x85x12 cm) with truncated pyramids, ideal for the prevention of sores and breathability.

The **anti-decubitus mattress** is a solution designed for prolonged bed rest contexts, aimed at the **prevention of pressure sores**. Made of high-quality **flexible expanded polyurethane**, the support stands out for its non-deformable nature and high mechanical resistance, ensuring a stable and long-lasting base. The structure is characterized by a **homogeneous cellular configuration** that allows full air permeability, a determining factor for maintaining a dry and healthy microclimate for the patient's skin.

Technical features

- **Dimensions:** W. 195 x D. 85 x H. 12 cm
- **Configuration:** Ventilated mattress with truncated pyramids, single-slab
- **Material:** High-resistance flexible expanded polyurethane
- **Structure:** Homogeneous and non-deformable cellular structure
- **Permeability:** Fully permeable to air to promote ventilation
