

Anti-decubitus mattress for pressure sores h937_05

Ventilated anti-decubitus mattress in high-density polyurethane foam, 195x120x12 cm. Breathable structure for the prevention of pressure sores.

The **ventilated anti-decubitus mattress** represents a fundamental solution for the management and prevention of pressure injuries in patients confined to long-term bed rest. Made of high-quality **flexible polyurethane foam**, this support stands out for its **non-deformability** properties and high mechanical resistance, ensuring constant support over time. The distinctive feature lies in its **homogeneous cellular structure**, specifically designed to ensure complete **air permeability**, reducing the accumulation of heat and moisture between the patient's body and the mattress surface.

Technical features

- **Dimensions:** Length 195 cm x Depth 120 cm x Height 12 cm
- **Type:** Ventilated anti-decubitus mattress
- **Material:** High-resistance flexible polyurethane foam
- **Configuration:** Homogeneous internal structure
- **Physical properties:** Non-deformable and breathable material
- **Air circulation:** Total cellular permeability
