

Anti-decubitus mattress with straight internal section h206_69

Anti-decubitus mattress in polyurethane foam with lateral stiffening edges.

Anti-decubitus mattress divided into **2 parts**: the support structure and the **stiffening edges** are made of high-resistance foam (density 40 kg/m³) to **best support every patient movement**.

The internal surface, which in turn can be made of **3 removable sections**, allows for perfect adhesion of the **mattress on articulated beds** and facilitates sanitization by operators and the replacement of any damaged parts, reducing maintenance costs. The mattress is made without glued parts; the support structure encloses the single section or the three sections which are placed inside it. The anti-decubitus mattress was created for hospitals, intensive care units, nursing homes, and rehabilitation centers and conforms anatomically to the patient's body, **distributing pressure optimally** and increasing the support surface; it is easy to install and can be sterilized at 134° in an autoclave.

Technical features:

- Fire reaction class: Class 1/M
- Internal section in viscoelastic PU, density 80 kg/m³
- Material: Support structure in expanded PU 40 kg/m³
- Fire reaction class: Class 1/M
- Dimensions: W.195xD.85xH.14 cm

INFORMATION

- **Depth** 14 cm
- **Width** 85 cm
- **length** 195 cm
- **Type** in poliuretano espanso

Anti-decubitus mattress with straight internal section h206_69

Anti-decubitus mattress with straight internal section h206_69

Depth: 14 cm

Width: 85 cm

Length: 195 cm

Typology: in poliuretano espanso
