

Bag holder waste bin with wheels h809_19

Professional bag holder bin in stainless steel and polypropylene, 58x48x76 cm, with pedal closure for maximum hygiene in HoReCa environments.

This **professional bag holder bin** represents an advanced technical solution for waste management within industrial kitchens, restaurants, pizzerias, and canteens. Designed to combine robustness and operational practicality, the structure integrates a **stainless steel** frame with high-resistance polypropylene components, ensuring long-term durability even in high-humidity environments or those subject to frequent cleaning cycles.

The strength of the system is the closing mechanism: an **automatic folding ring** operated by a pedal allows the bag to be sealed when not in use. This solution is essential for preventing the dispersion of unpleasant odors and ensuring high hygiene standards, eliminating the need for manual contact with the container or the waste itself.

Technical features

- **Dimensions:** W 58 x D 48 x H 76 cm
- **Load capacity:** compatible with standard 40-liter bags
- **Opening system:** automatic folding ring controlled by pedal
- **Materials:** supporting structure in stainless steel; base and bag holder support in polypropylene
- **Mobility:** 4 swivel wheels with 80 mm diameter for easy movement
- **Maintenance:** removable base to facilitate sanitization operations of the support
