

Street furniture barrier fence with T-profiles h140_555

Urban steel barrier with T-profiles and scratch-resistant wooden slats. Dimensions 100x80 cm, ideal for space delimitation and bicycle support.

The **H140_555 barrier fence** represents an advanced technical solution for the management and safety of urban spaces. Characterized by the use of **T-section steel profiles** with a thickness of 6 mm, the structure guarantees high mechanical resistance and torsional stability. The distinguishing feature of the module is the integration of **shaped wooden slats**, positioned laterally to act as a protective support for bicycles: the slight protrusion of the wood avoids direct contact between the cycle frame and the metal structure, preventing scratches and aesthetic damage.

The product is subjected to a rigorous surface protection protocol that includes washing, sandblasting, and application of an anti-corrosive primer, completed by a **thermosetting powder coating** baked at 180°C. This process gives the product superior resistance to atmospheric agents and UV rays, drastically reducing long-term maintenance costs.

Technical characteristics

- **Height:** 100.0 cm
- **Width:** 80.0 cm
- **Depth:** 8.0 cm
- **Total weight:** 26 kg
- **Materials:** Galvanized steel and high-quality wooden slats
- **Structural section:** 6 mm "T" profiles
- **Standard finish:** High-visibility RAL 1018 (zinc yellow)
- **Fixing system:** Direct ground embedding
- **Supply:** Product fully assembled with screws included
