

Parking barrier h109161

Parking barrier in 38x1.5 mm tubular steel, red polyester painted, ground fixing with anchors, height 47.3 cm.

The parking barrier is an access control solution made of **38x1.5 mm diameter tubular steel**, curved and designed for ground fixing. It ensures the physical blocking of access points and the orderly management of spaces, used in public and private contexts where it is necessary to regulate vehicle access.

The metal parts are protected with **thermosetting polyester powder coating**, a specific formulation for outdoor environments with consolidated resistance to UV rays and no film chalking over time. Locking in the vertical position is ensured by a **padlock positioned at the base of the plate**.

Technical features

- Material: tubular steel
- Tubular diameter: 38x1.5 mm
- Finish: painted red
- Width: 46 cm
- Height: 47.3 cm
- Weight: approx. 3 kg
- Fixing: to the ground via rounded plates and expansion anchors
- Locking: padlock at the plate base
