

Basket stretcher with wheels h687_43

Emergency basket stretcher with wheels

Basket stretcher intended for the **recovery and transport of patients**, usable for rescue operations in those cases where it is necessary to protect the patient from **lateral impacts** and it is not possible to intervene with standard transport equipment. Equipped with a lifting system applied to fixed anchors, maintaining the stretcher in a horizontal position relative to the ground in all cases. The patient is not expected to be able to interact with the devices. The **single-shell body** makes it extremely **safe and easy to handle**. Aluminum load-bearing frame with telescopic handles to make lifting operations safer and simpler. Equipped with eyelets for attaching carabiners. **Perimeter rope** for fixing belts and any accessories. **Large diameter wheels** on the front side to allow short movements. Footrest to improve longitudinal containment.

Technical specifications:

- Length: 2240 mm
- Length with extended handles: 2760 mm
- Width: 640 mm
- Height: 190 mm
- Wheels: 2x ø 200 mm
- No. of handles: 12
- Materials: PE PP AL
- Load capacity approx.: 350 kg
