

Bed restraint belt with velcro closure h983_05

Adjustable restraint belt with 22 cm high soft bodice, velcro and buckle closure, allows prone or lateral decubitus with discrete trunk mobility. Total length: 230 cm. Adjustable circumference: from 85 to 120 cm.

The **H983_05 restraint belt** is a safety device designed to **limit the patient's movements in a controlled manner**, while still allowing **discrete trunk mobility**. Ideal for use in **hospitals, clinics, and healthcare facilities**, it allows for **prone or lateral decubitus** and can be opened independently by the patient if necessary.

Made of **100% cotton**, the belt features a **soft bodice** with **internal MTP padding**, composed of **polyamide velvet and ether-based polyurethane**, ensuring **comfort and breathability**. The closure is via **adjustable velcro and an acetal plastic trident buckle**, with resistance up to **100 kg**, ensuring **stability and adaptability**.

The **total length is 230 cm**, with an **adjustable circumference from 85 to 120 cm**, while the **flap height varies between 20 and 22 cm**. Fixing to the bed is guaranteed by an **adjustable strap and loops for the bed rail**.

To be used exclusively by **specialized healthcare personnel**.

For advanced security, it is possible to purchase the **safety button and safety key separately**, which prevent unauthorized opening. The closure system can **only be unlocked with the dedicated magnetic key**.

Purchase the **H983_05 restraint belt** now to ensure stability and safety for patients! Request a personalized quote immediately.
