

Bench with luminescent particles h338_41

Bench for public spaces in reconstituted stone. Equipped with luminescent particles. Dimensions: L. 200 x D. 50 x h. 50 cm.

Bench with a minimal and modern design, ideal for gardens and public areas such as squares, city streets, promenades. Its peculiarity lies in the construction material: **polished reconstituted stone**. This material, in fact, contains **luminescent particles integrated into the conglomerate** that have the property of absorbing solar or artificial light, releasing it during the night hours. The persistence of the lighting varies depending on the irradiation and has an approximate duration of 4-6 hours. The bench is **available in multiple colors**.

Technical features:

- Dimensions: L. 200 x D. 50 x h. 50 cm
- Weight: approx. 420 kg
- Material: polished reconstituted stone
- Multiple colors available
- Luminescent particles integrated into the conglomerate
