Bike inflation station h617_16

Inflation station for bikes and e-bikes. Compatible with all valve types. Available in various colors.

Bicycle and e-bike tire inflation station, perfect for providing cyclists and people commuting by bike with adequate equipment to inflate and check their bike tire pressure. It can be installed in public places or in apartment buildings and parking lots for offices, schools and universities. Equipped with **pump and pressure gauge** for monitoring tire pressure; specifically, the pump is of excellent quality and the pressure gauge is "glycerine-filled", meaning it prevents condensation from forming to ensure a clear pressure reading. The inflation station is also **easy to use** and **compatible with all types of valves**. The structure is lightweight yet robust and features **special holes at the base for ground fixing**.

Technical features:

- Dimensions: W.30 x D.30 x h.75 cm
- Material: aluminum
- Stainless steel hardware
- Compatible with all valve types on the market (max 8 bar)
- Base with 4 holes Ø11 for ground fixing
- Available in multiple colors

N.B: during the winter period, if not in use, we recommend covering it
