

Black bollard with reflective bands h1047_07

Removable urban furniture bollard h1047_07 in black painted galvanized steel with two 20 cm white reflective bands. Height: 100 cm above ground.

The **black bollard with reflective bands h1047_07** is a professional high-visibility and high structural resistance road delimitation and protection device, specifically developed for **municipal administrations, public technical offices, employers, urban interior and exterior designers, traffic managers, and company safety officers**. This complement responds to the organizational need to regulate traffic flows and safeguard public safety, solving the operational problem of **securing access to pedestrian areas, limited traffic zones (ZTL), and company or public car parks, while allowing emergency or service vehicles to pass in case of emergency or necessity thanks to a quick opening and disassembly system of the passage**. From a material profile, the unit is entirely made of robust galvanized steel with a black painted finish, enriched by two 20 cm white reflective bands each, a structural treatment that guarantees excellent protection against rust and atmospheric corrosion while ensuring maximum reflectance and nighttime visibility or in low light conditions. The architecture of the post provides for a fixed external diameter of 60 mm and develops a useful height of 100 cm above ground. Operation is based on an integrated mechanism with automatic closure of the station, while removal and unlocking operations take place through the use of a specific triangular key. The stability of the module on the ground is guaranteed by the positioning of a 35 cm deep lower ground socket, included in the supply of the shaft.

Technical features

- **Product type:** removable traffic bollard with high-visibility reflective bands
- **Code reference:** h1047_07
- **Construction material:** galvanized steel
- **Surface and aesthetic protective finish:** painted black
- **Integrated visual signaling devices:** two white reflective bands with a structural height of 20 cm each
- **Post external diameter (D):** 60 mm (D60mm)
- **Useful height of the structure:** 100 cm above ground
- **Fixing base specifications (Anchoring):** 35 cm deep lower ground socket to be buried
- **Integrated locking mechanism:** post with automatic closing system
- **Unlocking and removal mechanics:** quick removal of the metal shaft performable via triangular key (key not included, available as an optional accessory)
- **Main operational functionality:** allows the rapid opening and disassembly of a passage in case of emergency or logistical needs
- **Installation suitability:** outdoor areas, pedestrian accesses, road boundaries, and company or public parking areas

Optional:

- Triangular key
