Boat gangway h858_76

Compact nautical gangway in seawater-resistant aluminum, load capacity 149.7 kg, weight 8.6 kg, with non-slip surface and handrail included.

The **aluminum nautical gangway for people with reduced mobility** is a compact and non-folding solution, designed to facilitate boarding and disembarking from yachts and sailing boats. The lightweight and robust structure, with a **weight of approximately 8.6 kg and a maximum load capacity of approximately 149.7 kg**, allows for practical and stable boarding operations.

Made of **high-quality seawater-resistant aluminum**, the gangway is designed to withstand the typical conditions of the nautical environment. The non-slip surface promotes stable footing during transit, while the integrated 10.16 cm diameter wheels facilitate movement and positioning.

The equipment includes an **anchoring socket and pre-arranged eyelets for fixing the included handrail system**, which provides an additional support point during passage. This configuration makes the gangway particularly suitable for people with limited mobility, depending on the specific access conditions of the vessel.

An expression of German manufacturing tradition, the gangway combines construction precision, resistance to the marine environment, and practicality of use, meeting the needs for on-board access in pleasure boating.

Technical specifications

- Type: nautical gangway for on-board access
- Structure: compact, non-folding
- Material: high-quality aluminum
- Resistance: seawater-resistant construction
- Walkway surface: non-slip
- Weight: approx. 8.6 kg
- Maximum load capacity: approx. 149.7 kg
- Wheels: integrated
- Wheel diameter: 10.16 cm
- Equipment: anchoring socket
- Preparation: eyelets for handrail fixing
- Handrail: handrail system included
- Intended use: yachts and sailing boats
- Expected use: on-board access also for people with reduced mobility
- Production: German manufacture
