Boat gangway h858_77

Folding aluminum nautical gangway for wheelchairs, with a load capacity of 300 kg, non-slip surface and double handrail included.

The **folding nautical gangway for wheelchairs and people with reduced mobility** is designed to facilitate access on board yachts and sailboats. The high-quality aluminum structure combines robustness and practical handling, with a **maximum load capacity of approximately 300 kg**, meeting the boarding needs of people with mobility difficulties.

Made of **seawater-resistant aluminum**, the gangway is intended for use in the typical conditions of the nautical environment. The increased width configuration and the Heavy Duty reinforced structure are designed to provide a stable connection between the dock and the boat, even when it is necessary to facilitate the passage of people using a wheelchair.

The **non-slip walking surface** promotes stability during transit, while the integrated 10.16 cm diameter wheels facilitate the movement and positioning of the gangway. The equipment also includes an anchoring socket and eyelets prepared for fixing the **included double handrail system**, which provides additional support points during boarding and disembarking operations.

The folding structure allows for reduced bulk during stowage on board. The product is an expression of German manufacturing and is designed with attention to structural strength, construction precision, and durability in nautical use.

Technical features

- Type: folding nautical gangway for boarding access
- Intended use: yachts and sailboats
- Expected use: boarding access for people with reduced mobility and wheelchair users
- Structure material: high-quality aluminum
- Resistance: seawater-resistant construction
- Walking surface: non-slip
- Maximum load capacity: approx. 300 kg
- Structure: folding
- Wheels: integrated
- Wheel diameter: 10.16 cm
- Equipment: anchoring socket
- Preparation: eyelets for fixing the double handrail
- Handrail: double handrail system included in the supply
