

Bobath therapy table h919_23

Bobath therapy table in steel and synthetic leather (200x150 cm). Variable height 45.5-91.5 cm, ideal for complex neurological rehabilitation.

The **Bobath therapy table** is a professional solution designed specifically for clinics, rehabilitation centers, and physiotherapy studios specialized in the treatment of neurological pathologies. Thanks to its wide supporting surface, the device allows the therapist to operate with maximum freedom of movement, supporting the patient in facilitation maneuvers that require the simultaneous presence of both operator and user on the work surface.

The robust **steel structure** provides superior stability, essential for managing patients with different motor abilities in total safety. Comfort is guaranteed by high-density foam padding covered in high-quality **synthetic leather**, chosen for its wear resistance and ease of sanitization in high-rotation contexts.

Technical features

- Structure: high-resistance steel with protective coating
- Padding: high-density technical foam
- Finish: medical-grade synthetic leather upholstery
- Maximum load capacity: 170 kg
- Platform dimensions: L. 200 x W. 150 cm
- Height range: adjustable from 45.5 to 91.5 cm
