

Veterinary recovery box on wheels h601_22

Veterinary recovery cage in AISI 304 stainless steel with fixed base, conductive wheels and ergonomic access. Suitable for small and medium-sized animals.

The veterinary recovery cage represents an essential furniture element in veterinary clinics and surgeries, designed to guarantee the safe hospitalization and continuous monitoring of the animal patient. The box is suitable for both cats and small to medium-sized dogs and is mounted on a **fixed base in AISI 304 stainless steel**, which allows the doctor to check the patient directly in the cage without having to bend down, reducing physical fatigue during clinical operations.

The structure is made entirely of **stainless steel**, a material that ensures maximum ease of disinfection and sanitization, a fundamental requirement in veterinary healthcare environments. The **conductive wheels for electromagnetic staticity**, 2 of which are **braking**, allow the cage to be moved with extreme ease and kept in a stable position during clinical use.

Technical features

- Material: AISI 304 stainless steel
- Base: fixed
- Number of places: 1
- Wheels: conductive for electromagnetic staticity, 2 of which are braking
- Dimensions: W.60.5 x D.72 x H.145 cm
