

Metal fire extinguisher cabinet h21413

Anti-corrosion metal fire extinguisher cabinet for 5-12 kg models. Dimensions 325x250x802 mm with PVC closure and yellow breakable plate.

This fire extinguisher cabinet is designed to ensure maximum protection and accessibility of fire-fighting equipment in professional and industrial contexts. Made of **high-quality metal** with corrosion-resistant treatment, the structure ensures long-lasting protection against atmospheric agents and mechanical stress. The internal configuration is optimized for housing extinguishers of different volumes, ensuring versatility in corporate safety management.

The closing system relies on a practical **PVC handle** designed for the application of a security seal, preventing tampering or improper use without compromising the speed of intervention in an emergency. The visibility of the equipment is ensured by the **yellow breakable plate**, a distinctive technical element that facilitates immediate identification of the equipment.

Technical characteristics

- **External dimensions:** 325 mm (W) x 250 mm (D) x 802 mm (H)
- **Compatibility:** suitable for extinguishers with a mass of 5, 9, and 12 kg
- **Material:** steel compliant with UNI EN 10130 standard
- **Treatment:** high-resistance anti-corrosion finish
- **Closure:** sealable PVC
- **Included accessories:** yellow breakable plate
