

Plastic fire extinguisher cabinet h21410

Molded polypropylene fire extinguisher cabinet, 335x240x865 mm. Universal for models from 5 to 12 kg with integrated fixing ring.

The **h21410** fire extinguisher cabinet represents a professional solution for the protection and housing of fire-fighting equipment in industrial, commercial, and civil contexts. Made entirely of **high-quality polypropylene** through an injection molding process, the structure guarantees high mechanical resistance and protection against the degrading action of atmospheric agents. The system is designed to ensure the safe housing of various fire extinguisher volumes thanks to the adjustable **internal fixing ring**, which ensures the stability of the device even in environments subject to vibrations or stress.

Technical characteristics

- Material: High mechanical resistance polypropylene
- Production process: Injection molding
- External dimensions: W 335 x D 240 x H 865 mm
- Compatibility: 5, 9, and 12 kg powder or CO2 extinguishers
- Equipment: Universal internal fixing ring included
- Color: Black base with high-visibility red lid
- Operating temperature range: from -30°C to +60°C
- Environmental suitability: Indoor and outdoor installation, UV resistant
