

Fire extinguisher cabinet 6 kg h21409

Polypropylene fire extinguisher cabinet for 6 kg. Dimensions 335x240x620 mm. Weather-resistant, with internal fixing ring. The **h21409 fire extinguisher cabinet** is a professional protective device designed for storing fire safety equipment in both civil and industrial contexts. Made of **high-quality polypropylene** through an injection molding process, the structure offers high mechanical resistance and protection against degrading environmental factors. The system is equipped with a universal **internal fixing ring**, which ensures the stability of the extinguisher by preventing accidental movements or falls inside the compartment.

Technical characteristics

- **Material:** Injection-molded high-density polypropylene
- **Dimensions:** W 335 x D 240 x H 620 mm
- **Compatibility:** Optimized for 6 kg extinguishers
- **Thermal resistance:** Operating from -30°C to +60°C
- **Color:** Black base and high-visibility red lid
- **Installation:** Suitable for indoor and outdoor environments
- **Locking system:** Internal fixing ring included
