

Cast iron bollard without rings h744_40

Fixed cast iron bollard EN GJL 200 with octagonal base and decorative sphere, height 80 cm. Classic design without eyelets for prestigious contexts.

The **H744_40 bollard** is an urban furniture element designed for the delimitation and protection of pedestrian areas, squares, and areas of historical relevance. The structure is made of **cast iron EN GJL 200**, a material compliant with the **UNI EN 1561** standard, which ensures high resistance to compression and atmospheric agents. The design is characterized by a truncated conical column with an octagonal base, topped by a decorative sphere with low-relief friezes, offering a refined aesthetic that integrates perfectly into classic architectural contexts.

To ensure maximum stability and protection against corrosion, the bollard integrates a **hot-dip galvanized iron central core**. This technical measure enhances the structural strength of the post, making it suitable to withstand mechanical stress and wear in high-traffic outdoor environments. The absence of lateral eyelets promotes a clean aesthetic line, making it ideal for installations where the use of connection chains is not required.

Technical features

- **Material:** Cast iron EN GJL 200 (UNI EN 1561 certified)
- **Structure:** Truncated conical column with octagonal base
- **Decorative element:** Upper sphere with low-relief friezes
- **Internal core:** Anti-corrosion hot-dip galvanized iron
- **Height above ground:** 80 cm
- **Burial depth:** 20 cm
- **Base diameter:** 19 cm
- **Fixing system:** Direct burial at level "0"
- **Eyelets:** Not present

- **Intended use:** Historic centers, sidewalks, squares and public areas
