

Cat recovery cage 6 units h601_25

Recovery cage for cats and small dogs, 6 units, removable PVC dividers, doors and small access doors, conductive braking wheels. For veterinary clinics.

The recovery cage is a structured solution for **veterinary clinics and facilities** that require an organized and functional space for the temporary hospitalization of cats and small dogs during post-operative or diagnostic recovery phases.

The product meets specific needs for **hygiene, safety, and space management**, allowing multiple patients to be housed simultaneously in a single compact and mobile structure.

The structure is extremely resistant and allows for flexible use: the **removable non-toxic PVC dividers** allow spaces to be configured according to clinical needs, using the lower and upper parts as a single or separate recovery area. The **dedicated guides facilitate the positioning** of the dividers and ensure stability during use.

Access to patients is simplified by the presence of **2 main doors and their respective dedicated small doors** for the animal's entry, while **all dividers are provided with passage holes** that facilitate natural circulation.

Mobility is guaranteed by **conductive wheels for electromagnetic staticity**, 2 of which are braking, ensuring stability and ease of movement within the clinic.

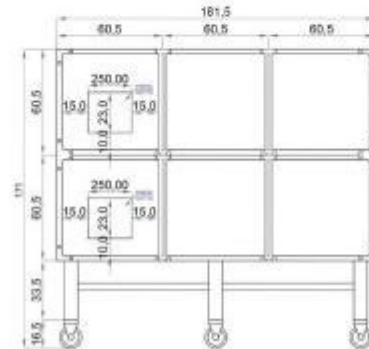

Technical features

- Capacity: 6 units
- Removable non-toxic PVC dividers
- Guides for divider positioning
- Passage holes on all dividers
- 2 doors with dedicated small doors for animal entry
- Conductive wheels for electromagnetic staticity (2 braking)
- Dimensions: W 181.5 × D 72 × H 171 cm
