

## Chair for secondary and primary school h979\_46

Ergonomic cantilever chair for primary and secondary school h979\_46. Equipped with a one-piece single-color polypropylene shell, epoxy steel cantilever structure, and non-slip texture. Seat height: 380 mm.

The **secondary and primary school chair h979\_46** is a professional school seat with high structural resistance, specifically developed for **school principals, employers of educational institutions, interior designers, teachers, and school safety managers**. This furnishing meets the organizational need to set up modern and dynamic teaching spaces, solving the operational problem of **providing students with a correct and comfortable posture in both traditional and collaborative classrooms, ensuring maximum stability and facilitating positioning thanks to a lightweight and versatile cantilever configuration**. As clearly documented in the visual survey of the file image\_6079bb.png, the model stands out for its cantilever structure, formed by a continuous welded steel tube that rests on stable slides equipped with terminal feet. The seat consists of an ergonomic and flexible one-piece polypropylene shell with a color-coordinated finish and seat, enhanced by anti-trauma rounded edges, a non-slip surface texture, and a practical shaped upper handle that facilitates transport and lifting with one hand. The metal frame is entirely protected by a high-penetration epoxy coating to prevent scratches and corrosion. The furniture is supplied already fully factory-assembled for immediate use.

## Technical features

- **Product type:** ergonomic school chair with cantilever structure for collaborative classrooms
- **Code reference:** h979\_46
- **Overall width (W):** 41 cm (410 mm)
- **Overall depth (D):** 40 cm (400 mm)
- **Total overall height (H):** 69.5 cm (695 mm)
- **Specific seat height from the ground:** 380 mm
- **Seat and backrest material:** molded one-piece polypropylene shell
- **Ergonomic shell properties:** anatomical design, anti-trauma rounded perimeter edges, and flexible rear reinforcement designed to ensure flexibility and durability
- **Plastic surface finish:** high-grip texture with non-slip properties
- **Integrated accessory components:** upper handle built into the backrest for easy transport
- **Frame architecture (Structure):** cantilever (overhanging) type with continuous slide
- **Material and structure profile:** steel tube with Ø 20 mm diameter, fully welded for optimal stability
- **Metal finish and protection:** protective coating with impact-resistant epoxy painting
- **Supply color finishes:** chair and shell configured in the same color (integrated single color); available in various colors of your choice
- **Base protection systems:** non-slip and scratch-resistant plastic feet installed on the supporting metal slides
- **Delivery configuration:** supplied fully assembled and ready for use in the departments
