

Children's ball pit h364_90

Soft corner ball pit "Angolo di bosco" (146x146x136h cm) in polyurethane foam. Super-washable, class 1 fire-retardant and antibacterial coating.

The **children's ball pit h364_90**, named "Angolo di bosco", is a padded corner play structure designed for setting up nurseries, kindergartens and recreational spaces. Complete with perimeter border and mat, this pit solves the need for educators and facility managers to configure a soft and safe play area, drastically reducing hygienic maintenance times. The medium-bearing polyurethane foam padding ensures adequate structural containment while protecting children during psychomotor activities. The coating in SUPER-WASHABLE technical fabric effectively addresses the problem of dirt in school contexts: it is highly resistant to tears and allows even the most critical stains generated by creative activities, such as markers, tempera paints or grease, to be removed with a simple damp cloth. The materials used, strictly non-toxic, antibacterial, phthalate-free and class 1 fire-retardant, guarantee total compliance with safety regulations for early childhood facilities.

Technical characteristics

- **Type:** Padded corner ball pit/basin "Angolo di bosco" (complete with border)
- **Overall dimensions (L x W x H):** 146 x 146 x 136 cm
- **Supply composition:** 2 walls, 1 bottom mat and 1 band
- **Structural padding:** Medium-bearing polyurethane foam
- **Coating material:** SUPER-WASHABLE fabric, soft and pleasant to the touch
- **Fabric properties:** Class 1 fire-retardant, phthalate-free, non-toxic and antibacterial
- **Mechanical tolerance:** Highly resistant to tears and abrasions
- **Aesthetics:** Made in fresh colors
- **Ordinary maintenance:** Washable with a damp cloth (effectively removes grease, markers and tempera)
- **Deep sanitization:** Surface totally sanitizable with alcohol-based products
