

Construction site delimitation barrier h632_36

120x100 cm reflective road barrier with galvanized supports, ideal for the delimitation of construction sites and signaling of hazard areas.

The **road signaling barrier** is a collective protection device indispensable for the correct delimitation of construction sites and work areas. Designed to guarantee **maximum visibility** both day and night, it meets the need to protect operating personnel and vehicles in transit near excavations or risk zones. The structure includes metal supports that ensure correct vertical positioning on various types of road surfaces.

Technical specifications

- **Support material:** Galvanized steel for high resistance to oxidation and atmospheric agents.
- **Dimensions:** Width 120 cm x Height 100 cm.
- **Signage:** Panel with red and white reflective oblique stripes to increase visibility in low light conditions.
- **Support system:** Galvanized feet included for optimal stability on the laying surface.
