

Dog waste bin with bag dispenser h19121

Galvanized and painted metal urban furniture container with integrated tear-off bag dispenser, tubular lock, 60° inclined lid. Complete with 250 bags.

Urban furniture container designed for practical and economical waste management, integrated with a **polyethylene tear-off bag dispenser**. Complete solution dedicated to public spaces, rest areas, and contexts where it is necessary to combine containment and controlled distribution of collection bags.

The structure adopts a **rectangular base parallelepiped shape** with a **top face inclined at 60°**, on which an ergonomic lid equipped with a comfortable handle is mounted. The front wall is equipped with a **drop-down door** provided with a **tubular security lock**, which allows controlled access to the internal container and prevents unauthorized removal of the bag.

On the side of the container is an **integrated bag dispenser**, which allows the tear-off bags to be taken individually from the front slot. Refilling is done by opening the front wall of the dispenser with the supplied key and hooking the bags in bundles in the appropriate seat.

The removal of the internal bag is carried out by opening the front door of the container outwards and releasing it from the appropriate retention clips.

Technical characteristics

- **Shape and proportions:** Rectangular base parallelepiped with top face inclined at 60°
- **Material:** Galvanized and painted metal structure
- **Closing:** Inclined lid with handle; front door with tubular security lock
- **Integrated dispenser:** Tear-off distribution with front slot and refill via key
- **Initial load:** 5 blocks of 50 polyethylene bags, total 250 bags
- **Included accessories:** Access and refill key; identification plate; lid with handle
- **Installation:** Fully assembled and ready for use; prepared for direct ground burial
- **Finishes:** Available in various colors
