

Corner guards for kindergartens h703_06

Protective corner profile in E.V.A. height 100 cm and thickness 10 mm. Non-toxic and antibacterial, ideal for securing corners in schools and playrooms.

The **protective corner guard** represents an essential technical solution for the prevention of injuries resulting from accidental impacts against sharp corners. Specifically designed for high-traffic environments for children, the profile combines a high impact absorption capacity with rigorous hygienic standards. The closed-cell plastic material guarantees effective passive protection, protecting the physical integrity of users in educational and recreational contexts.

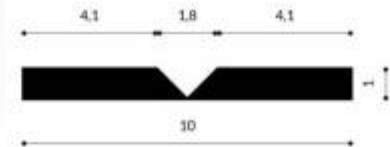

Technical features

- **Material:** closed-cell E.V.A. (Ethylene Vinyl Acetate)
- **Height:** 100 cm
- **Thickness:** 10 mm
- **Waterproofing:** Resistant to oils, basic acids, and liquids
- **Safety:** Non-toxic material
- **Hygiene:** Antibacterial and anti-mold properties
- **Environmental compatibility:** Suitable for indoor and outdoor installations
- **Variants:** Available in different colors for architectural integration
- **Installation:** Application using fast-setting adhesive
