

Corner guards for kindergartens h703_08

Protection for corners in non-toxic E.V.A., height 200 cm and thickness 10 mm. Ideal for safety in kindergartens and play areas, antibacterial and resistant.

This **corner protection** is specifically designed to ensure maximum passive safety in environments frequented by children, such as kindergartens, nurseries and playrooms. Made of **E.V.A. (Ethylene Vinyl Acetate)**, the cellular structure of the material allows for excellent shock absorption, minimizing the risks resulting from accidental impacts against sharp corners.

The composition is intrinsically **non-toxic** and repellent to all substances, including oily and acidic ones. Thanks to its **mold-resistant and antibacterial** properties, the product maintains high hygiene standards over time, making it easy to clean and sanitize.

Technical features

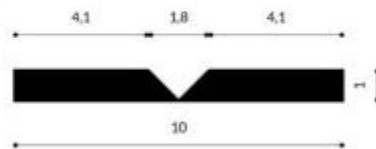

- **Material:** E.V.A (Ethylene Vinyl Acetate)
- **Height:** 200 cm
- **Thickness:** 10 mm
- **Safety:** Non-toxic and certified for school use
- **Chemical resistance:** Resistant to oils, basic acids and organic liquids
- **Hygiene:** Permanent mold-resistant and antibacterial properties
- **Customization:** Available in different colors
