

Corner guards for kindergartens thickness 1 cm h703_05

Protective corner guard in non-toxic and fire-retardant expanded polyethylene, height 200 cm. Ideal for securing schools and play areas.

The **protective corner guard** is a passive safety device specifically designed for the protection of children within school environments, kindergartens, and playrooms. Made of high-quality **expanded polyethylene**, the profile offers a high shock absorption capacity, preventing injuries caused by sharp edges and protruding corners. The structure of the material is inherently **non-toxic and fire-retardant**, ensuring the highest standards of hygiene and safety required by current regulations in public and private spaces dedicated to childhood.

Technical features

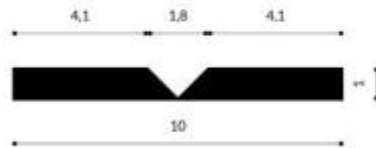

- Material: high-density expanded polyethylene
- Thickness: 10 mm
- Height: 200 cm
- Wing width: 5 + 5 cm (L-shape)
- Chemical properties: resistant to oils, basic acids, and liquids
- Certifications: complies with UNI EN 71-3 (safety of toys) and UNI EN 913 (gymnastic equipment) standards
- Reaction to fire: fire-retardant material
- Installation: application using specific quick-setting adhesive
- Color range: available in various colors for architectural integration
