

Crate transport trolley h6205

Steel parcel trolley 47x120 cm with 150 kg capacity. Tubular and sheet metal structure with rubberized wheels for professional load handling.

This parcel trolley is a professional solution designed to optimize manual material handling in contexts where mechanical resistance and maneuverability are primary requirements. Made with a combination of **tubular and sheet steel**, the structure ensures superior stability during the transport of packages, crates, and bulky items, significantly reducing the risk of deformation under load.

The sliding system is integrated by large-diameter solid rubber wheels, designed to absorb floor irregularities and ensure a smooth ride even at maximum load capacity. The frame's ergonomics facilitate levering and unloading operations, making it an indispensable ally for daily logistics and storage activities.

Technical specifications

- **Material:** High-resistance tubular and sheet steel
- **Wheels:** Solid rubber with 180 mm diameter
- **Total dimensions:** W 47 x H 120 cm
- **Toe plate dimensions (platform):** 47 x 20 cm
- **Maximum capacity:** 150 kg
- **Structure:** Ergonomic for manual load handling
