

Cylindrical container for used oil 500 liters h221_25

Double-walled PE container for used oils. 500 Liters.

Double-walled PE container for used oils, used lubricating oil, mineral oil, hydraulic oil, brake fluid, antifreeze, windshield washer fluid... of **vertical cylindrical shape** with flat bottom. Seamless centrifugal rotational molding. Made of **impact-resistant and acid-resistant polyethylene, UV-treated** for permanent exposure to external atmospheric agents. **Double tank** integrated one inside the other: **internal tank** with closed chamber containment and upper manhole for oil filling offset towards the front, hinged lid with bayonet closure and built-in vent, removable **large volume filter basket** for draining canisters and filters, screw cap for suction and total emptying, float level indicator with dial gauge; **external anti-spill safety tank** capable of holding the entire volume of the internal tank, leak detector built into the internal cavity. **Mandatory safety symbols**. Front adhesive label for waste identification (standard used oil). **Standard color black**.

Technical specifications:

- Material: PE
- Capacity: 500 lt
- Diameter: 960 mm
- Height: 1240 mm
- Weight: approx. 37 kg
- Approximate dimensions mm 960x960xH1240
