

Dog transport cage h601_71

Dog transport cage in aluminum and galvanized mesh, 88x68x88 cm, robust and lightweight structure with inclinable back part on request for vehicle adaptation.

The **dog transport cage H601_71** is designed for the **safe, stable, and hygienic** transport of animals inside professional or private vehicles. Intended for veterinary clinics, kennels, pet boarding facilities, and private owners who frequently transport dogs by car, it represents a robust and reliable solution to ensure the animal's well-being during travel.

The structure combines **aluminum** and high-resistance **galvanized mesh**, ensuring **durability, lightness, and protection from atmospheric agents**. The open mesh design on multiple sides allows for excellent **air circulation** and visibility, which is fundamental for the animal's comfort during the journey.

A distinctive element is the possibility to **request a tilted back part**, which allows the cage to be adapted to the shape of car and van trunks, permitting **better use of space** and greater stability on the road. This feature makes the model extremely versatile and compatible with numerous vehicles.

Technical features
