

Dog waste bin h326_47

Underground dog waste bin in ABS with oval aluminum tube, rotational lid and anti-intrusion opening. Dimensions 47x40x105 cm, 10 kg.

Dog waste collection bin designed for fixed installation in public and private environments. The system combines an underground structure with a removable container, ensuring practical management and aesthetic discretion. The solution is suitable for parks, public gardens and areas dedicated to pets, where it is necessary to maintain hygiene and order.

The product consists of an **oval aluminum tube** to be buried to a depth of 35 cm, on which the rectangular-based container is mounted. The rotational lid is locked by means of a **triangle lock**, facilitating authorized opening and preventing tampering. The **anti-intrusion opening** on the upper part of the lid allows the waste to be inserted while preventing access by wild animals or the overturning of the contents.

Technical characteristics

- Container material: **ABS**
- Anchoring structure: oval aluminum tube
- Closing system: rotational lid with triangle lock
- Insertion opening: anti-intrusion
- Container dimensions (from ground): W 47 x D 40 x H 105 cm
- Underground tube length: 35 cm
- Total weight: approximately 10 kg
- Fixing: direct burial
