

Dog waste bin with bag dispenser h32622

HDPE dog waste container with integrated bag dispenser. Rotational molded, impact and fade resistant. Metal base, ABS lid, triangle locks.

Specialized container for the collection and management of dog waste, designed for public environments such as parks, municipal gardens, and urban centers. The product offers a hygienic and tidy solution for cleaning common spaces frequented by pets.

The main structure is made of **HDPE through a rotational molding process**, a technique that gives the container superior mechanical properties and durability over time. This production process guarantees **great impact resistance**, protection from **UV aging** and **fading**, maintaining aesthetic integrity even in environments exposed to the elements.

The lid is made of **thermoformed ABS** and finished with superior quality two-component paints. The opening is controlled by a **triangle lock**, which allows regulated access and prevents accidental or intentional tampering.

The container is equipped with an **integrated bag dispenser** positioned laterally, also in ABS and equipped with a triangle key lock. The lower opening allows for easy removal of the bags without exposing the internal mechanics.

Technical characteristics

- Container material: **Rotational molded HDPE**
- Lid and dispenser material: **Thermoformed ABS**
- Base: **metal**
- Finishes: **two-component** paints
- Closing system: **triangle locks** (lid and dispenser)
- Bag dispenser capacity: **approximately 350 bags**
- Total weight: **approximately 14.5 kg**
