

## Dog waste collection bin with concrete base h32620

Dog waste collection container in polyethylene with ABS lid, 65-liter capacity, height 185 cm, equipped with integrated bag dispenser.

Container specifically designed for the hygienic collection of dog waste in public spaces such as parks, avenues, and municipal gardens. The truncated pyramid-shaped rectangular base structure ensures stability and facilitates waste emptying. The simple and functional design integrates into urban furniture without superfluous decorative elements, maintaining the focus on practicality.

The **container body is made of polyethylene** through rotational molding, a technique that provides high impact resistance and prolonged durability even in harsh weather and UV aging conditions. The **lid is constructed of thermo-perforated ABS** and finished with high-quality two-component paints, ensuring protection from atmospheric agents and unauthorized access. The closing system is managed by a **triangular lock** that allows opening exclusively to authorized personnel for emptying.

A distinctive element is the **upper metal structure housing an integrated bag dispenser**, facilitating users' immediate access to bags for hygienic waste collection.

## Technical features

- Container material: polyethylene (rotational molding)
- Lid: thermo-perforated ABS with two-component paints
- Closing system: triangular lock
- Foundation base: concrete
- Integrated bag dispenser, capacity approx. 350 bags
- Container capacity: 65 liters
- Total height: 185 cm
- Base dimensions: 60 x 60 cm
- Total weight: approx. 79 kg
