

Dog waste container with bag dispenser h28714

Dog waste container in galvanized steel with bag dispenser. Structure 35x25x130 cm, rear opening, internal bag holder, ground anchoring.

Specialized container for the collection of dog waste, designed for public environments such as parks, gardens, and municipal villas. The modular structure combines an upper dispenser for retrieving bags with a lower collection chamber, solving the problem of hygienic and orderly waste management in high-traffic spaces.

The construction entirely in **10/10 thickness galvanized steel sheet** guarantees structural strength and durability. The profile is shaped using laser technology and appropriately folded to ensure rigidity and dimensional precision. The **internal bag holder** keeps the bag in place during filling, while the **rear opening** allows for quick and hygienic waste removal without frontal handling.

The finishing process involves degreasing pre-treatment by vapors, controlled drying, and powder coating using electrostatic spray guns followed by oven curing with hot air circulation (180-200 °C). The powders used are non-toxic according to current regulations.

Technical features

- Material: galvanized steel sheet 10/10 thickness
- Hardware and bolts: galvanized according to UNI 3740 standard
- Equipment: internal bag holder
- Opening: rear for waste removal
- Anchoring: flush to the ground
- Dimensions: W 35 x D 25 x H 130 cm
- Finish: electrostatic powder coating, oven curing
