

## Dog waste container with bag dispenser h32606

Dog waste collection bin in HDPE with integrated ABS bag dispenser, mounted on galvanized pole, capacity 350 bags.

Dog waste collection bin designed for public areas, parks and green spaces with high pet traffic. The product integrates both the collection container and the bag dispenser in a single solution, eliminating the need for separate installations and simplifying the hygienic management of spaces.

The **container is made of HDPE (high-density polyethylene)** through a rotomolding process, ensuring structural strength and durability over time. This material offers excellent resistance to impact, climate aging, and fading, maintaining aesthetic integrity even after prolonged exposure to the sun and atmospheric agents.

The **thermoformed ABS bag dispenser** is integrated laterally into the main container and has a capacity of 350 bags, reducing refill times and ensuring continuous availability of bags to users. Access to the container is via a **lid equipped with a handle**, facilitating opening even with gloves or in wet conditions. Anchoring takes place on a **hot-dip galvanized pole** 75 cm high, suitable for insertion into sand and soil.

## Technical features

- Container: Rotational HDPE
- Bag dispenser: Thermoformed ABS
- Support pole: Hot-dip galvanized steel
- Lid: Equipped with ergonomic handle
- Dispenser dimensions: 228 x 445 x 95 mm (W x H x D)
- Pole height: 750 mm
- Dispenser capacity: 350 bags
