

Double oxygen cylinder trolley h705_06

Steel trolley for transporting 2 oxygen cylinders 10L, with safety straps, cylinder holder rings and 4 lockable double wheels.

The trolley is designed for the safe and easy transport of **two 10-liter oxygen cylinders**, meeting the needs of healthcare facilities, clinics, laboratories, and medical contexts where frequent movement of cylinders is a daily operation.

The structure is **fully welded in 25 x 25 mm steel tubing**, ensuring mechanical rigidity and long-term durability. The cylinders are anchored using **2 cylinder holder rings with a diameter of 150 mm**, specifically sized for standard cylinders, and **2 safety straps** that prevent unwanted movement during transport.

Mobility is ensured by **4 high-quality plastic double wheels with a diameter of 65 mm**, two of which are equipped with a locking system to anchor the trolley in a stable position when stationary. The **RAL 9002** (grey white) powder coating allows for easy cleaning and hygiene, a crucial element in healthcare environments.

Technical features

- Material: steel
- Structural tube: 25 x 25 mm, fully welded
- RAL 9002 powder coating
- 2 cylinder holder rings Ø 150 mm
- 2 safety straps
- Capacity: 2 cylinders of 10 L each
- 4 plastic double wheels Ø 65 mm (2 lockable)
- CE Certification
