

Double stainless steel outdoor fountain h109_284

Stainless steel fountain for public spaces with double tap and double drains. Dimensions: W. 1150 x D. 270 x h. 1000 mm.

Outdoor fountain with double tap consists of a round **stainless steel tubular structure**. Closed at the top by a steel cap fixed with two screws to be easily removed for tap installation and maintenance operations. A **square plate** is welded to the base, provided with 4 holes to fix the structure to the ground with expansion bolts. All **stainless steel parts** have an **electropolished sandblasted finish**. The **stainless steel taps** are front push-button with a return spring, normally closed, and connected to the stainless steel piping with a 1/2" threaded terminal for connection to the water supply. The **drains** entirely in **painted cast iron**, are composed of two pieces: a frame to be embedded in the ground and a removable grate to allow easy cleaning. Thanks to the taps with return spring, the risk of leaving it open is avoided, thus preventing water waste. The stainless steel material does not require constant maintenance.

Technical features:

- Dimensions: W. 1150 x D. 270 x h. 1000 mm
- Material: stainless steel
- Round tubular structure
- All stainless steel parts have an electropolished sandblasted finish
- Steel cap at the top
- Complete with stainless steel front push-button taps and cast iron drains
- Taps closed and connected to the stainless steel piping with a 1/2" threaded terminal for connection to the water supply
