

Double swing for playground h749_20

Double swing in aluminum and HDPE for public parks, 322x46x242 cm. Resistant structure with flat seats and design with colored shapes.

The **h749_20** outdoor swing is designed for the setting up of play areas in public parks, school gardens, and high-traffic recreational areas. The structure combines the maximum resistance of load-bearing elements with a playful and attractive design, enriched by decorative HDPE shapes that stimulate children's visual interaction. Thanks to the use of materials that are immune to atmospheric agents, the product guarantees a long operational life while minimizing routine maintenance.

Technical features

- **Dimensions:** L.322 x D.46 x h.242 cm
- **Structure:** High-resistance aluminum posts and central beam
- **Seats:** 2 flat seats with internal aluminum core and protective rubber coating
- **Suspensions:** Calibrated stainless steel chains
