

Drum storage cabinet h977_08

UV-stabilized polyethylene drum storage cabinet for 1 x 200L drum. Includes a 230L sump tray and monoblock structure measuring 88x83x199 cm.

The **h977_08 drum storage cabinet** is a vertical storage unit designed for the safe management of an industrial 200-liter drum. Developed to meet the needs of the **chemical, petrochemical, and pharmaceutical sectors**, this system prevents the risk of accidental spills into the soil and groundwater, ensuring compliance with environmental regulations. The structure is made of **UV-stabilized virgin polyethylene**, a material choice that provides total chemical inertia towards acids, bases, and oils, making the unit suitable for both indoor installation and outdoor areas exposed to the elements.

The design stands out for its **seamless monoblock construction**, a fundamental technical feature that eliminates structural weak points and ensures absolute watertightness of the integrated sump tray. With a containment capacity exceeding the volume of the drum itself, the cabinet serves as an essential protective barrier for operator safety and the integrity of production facilities.

Technical features

- **Material:** 100% high-quality UV-stabilized virgin polyethylene
- **Storage capacity:** 1 x 200-liter drum (not included)
- **Integrated sump tray:** 230 liters for total spill containment
- **External dimensions:** W 88 x D 83 x H 199 cm
- **Empty weight:** 82 kg
- **Maximum capacity:** 230 kg (uniformly distributed load)
- **Chemical resistance:** Excellent compatibility with acids, bases, and oils
- **Construction:** Seamless monoblock molding
- **Handling:** Suitable for forklifts with long forks (operation to be carried out exclusively when empty)
- **Color:** Industrial green
