

Drum trolley in tubular steel h62_11

Painted steel drum trolley, dimensions 120x52x100 cm and capacity 200 kg. Equipped with differentiated rubber wheels for maximum stability.

The **h62_11 drum trolley** is a professional solution designed for the safe and rational handling of drums in industrial and commercial contexts. The structure is made of high-thickness **painted tubular steel**, a construction choice that gives the product superior resistance to mechanical stress and a long operational life, even in intensive work environments.

Ergonomics and maneuverability are guaranteed by a system of **four rubber wheels** of high quality: two fixed wheels with a diameter of 180 mm and two 100 mm swivel wheels. The presence of **thread guards** on the swivel wheels protects the hubs from debris and filaments, ensuring constant fluidity of movement. Thanks to the maximum capacity of **200 kg** and the compact dimensions, the trolley allows to operate easily in tight spaces without compromising the stability of the load.

Technical features

- **Material:** Powder-coated steel
- **Structure:** Reinforced tubular
- **Overall dimensions:** 120 x 52 x h. 100 cm
- **Maximum capacity:** 200 kg
- **Fixed wheels:** 2 rubber wheels Ø 180 mm
- **Swivel wheels:** 2 rubber wheels Ø 100 mm with thread guards
- **Support surface:** Optimized for standard drums
