

Ductile iron road manhole cover Ø 210 mm h638_179

Ductile iron manhole cover, with interlocking lid and lifting slots. External dimensions: Ø 210 mm.

The **H638_179 ductile iron road manhole cover** is designed for the protection and safe access to **gate valves and valves** in water networks. Made of **GJS-500-7 ductile iron**, it guarantees **high mechanical and weather resistance**, ensuring reliability and long life even in heavy-duty outdoor contexts.

The **interlocking lid** is constrained according to the procedures provided in the technical notes, preventing accidental opening and loss. The presence of **central slots** allows easy lifting via dedicated keys, making maintenance operations simple.

Thanks to its compact circular shape and small size, the H638_179 model is ideal for installations in limited spaces or in urban areas where quick but safe access to underlying components is required.

Protect and simplify access to gate valves with the **H638_179 manhole cover**: buy it now or request a quote for supplies.

Technical features:

- **Material:** GJS-500-7 ductile iron
- **Shape:** Circular
- **External dimensions:** Ø 210 mm
- **Clear opening:** Ø 120 mm
- **Height:** 130 mm
- **Weight:** 6.10 kg
- **Lid:** Interlocking, constrained according to technical notes
- **Opening:** With central slots for lifting keys
- **Usage:** Manhole cover for gate valves and valves

User benefits:

- **Access:** safe and protected to gate valves.
- **Lid:** interlocking for greater stability and safety.
- **Resistant:** to atmospheric agents and wear.
- **Dimensions:** compact, ideal for small spaces.
- **Easy:** lifting via central slots.

FAQ:

1. What is this manhole cover designed for?

To protect and allow access to gate valves and valves in water networks.

2. **Is the lid securely fixed?**

Yes, it is interlocking and constrained according to specifications.

3. **How does it open?**

Through central slots with appropriate lifting keys.

4. **Is it suitable for outdoor use?**

Yes, ductile iron resists atmospheric agents.

5. **What is its height?**

Its height is 130 mm.

Mini buying guide:

The choice of a manhole cover for gate valves must be based on **resistance, safety, and practicality of use**.

The H638_179 model, thanks to the **interlocking lid**, ensures a stable closure, while **GJS-500-7 ductile iron** guarantees durability and robustness.

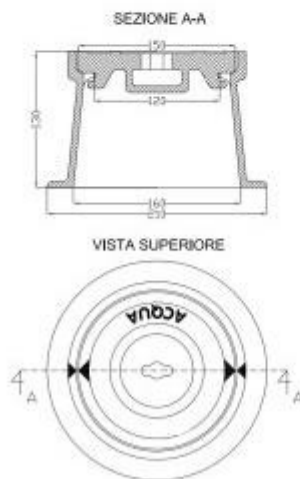

The **central slots** facilitate opening and maintenance, making it ideal for urban systems and water networks.
